Ittefaq Engineering Services offers product to meet the customers specifications in a wide range of applications including conventional Standby Generators, Base Load Power and Utility Paralleling Systems. Our standard range of Industrial Generators are powered by both Diesel and Gas Engines, ranging from 5 KVA to 2000 KVA capacity. Larger power requirements utilize digital multi-set paralleling control systems. For bespoke projects we are able to offer almost any engine, alternator, or control system brand to replicate or interface with equipment already installed at a clients existing location. Our solution will embrace the requirements of the end user, utilizing the wealth of experience that we have gained within the power generation industry.
