This new product changes cable construction, equipment protection, and safety. FR cable is made with fire-resistant, halogen-free compounds that are superior to standard cable. Years of research have produced a new generation of cable with excellent electrical and mechanical properties, superior flame-resistance, low smoke production, and reduced toxicity. These cables are ideal for high-performance, reliable, life-and-equipment-safe environments. FR cable has endless applications. This product's benefits make it ideal for many applications, including:

Major accidents that killed innocent people have taught us that public, commercial, and industrial occupant and user safety is paramount. Every safety feature that can prevent loss of life and property damage should be installed. Fire performance cables are used for fire alarms, emergency lighting, PA systems, CCTV systems, emergency power supplies, and smoke & fire shutters.

The correct selection and installation of these lifesaving cables ensures that in the event of an emergency, vital safety systems will continue to operate to aid in an orderly evacuation and to help emergency services gain quick and effective entry to

deal with the hazard.

Today's architect aims to build higher, larger structures with complex interiors for living and working. The construction of new superstructures means accommodating more people, and specifiers and consultants are responsible for their safety and well-being.

Spell Group understands what is required from a fire performance cable and the pressures specifiers and consultants face when selecting the right cable.
