According to World Health Organization (WHO) every year hundred of Millions of cases of insects and rodents diseases indicating the major threat to global public health that vector-born diseases are Operational, financial and managerial problems, together with environment change, pesticide resistance and population movement have caused an increase in prevalence of many of these diseases in recent years Fumigation generally refers to an efficient manner of targeted control of various kinds of pests and insects inside your residential, commercial and industrial properties.LEARN MORETermite controlTermite is a silent enemy that effects 24 hours to your precious items in the building, on time precautions are must to take in this connection A TO Z GLOBAL ENTERPRISES has trained and developed a team of technicians who can take care of all your termite protection jobs equipped with hammer drills, sub slab injectors, Roding devices, Protective equipments fund regulated pressure pumps. These professionals can handle any job the clients satisfactionsLEARN MORERodent ControlAdult House mice weigh from 1/2 to 1 ounce. They are generally grayish brown with a gray or off-white belly. House mice live in and around homes, farms, commercial establishments, and in

open fields and agricultural lands. House mice will eat many types of food but prefer seeds and grain. Foods high in fat, protein, or sugar may be preferred even when grain and seed are present. Such items include bacon, chocolate candies, butter, and nutmeats. Unlike Norway and Roof rats, House mice can survive with little or no water, obtaining their water from moisture in the food they eat
